Website Development Case Studies

Three web projects with overview, objectives, key features, target users, benefits, and a visual website preview for each case study.

Case Study 8: Online Food Ordering Website

Overview

The Online Food Ordering Website provides customers with a convenient way to browse food items, view prices, filter the menu, and add dishes to a shopping cart. Its clear layout helps users choose meals quickly from a computer or mobile device.

Objectives

- Present food items with names, descriptions, categories, ratings, and prices.
- Allow users to filter the menu and add selected items to a cart.
- Promote special offers and display customer feedback.

Key Features

- Food menu cards with images, descriptions, ratings, and prices.
- Category filters for burgers, pizza, and desserts.
- Cart counter and simple demo cart message.
- Promotional offer section and customer reviews.
- Responsive layout for desktop and mobile screens.

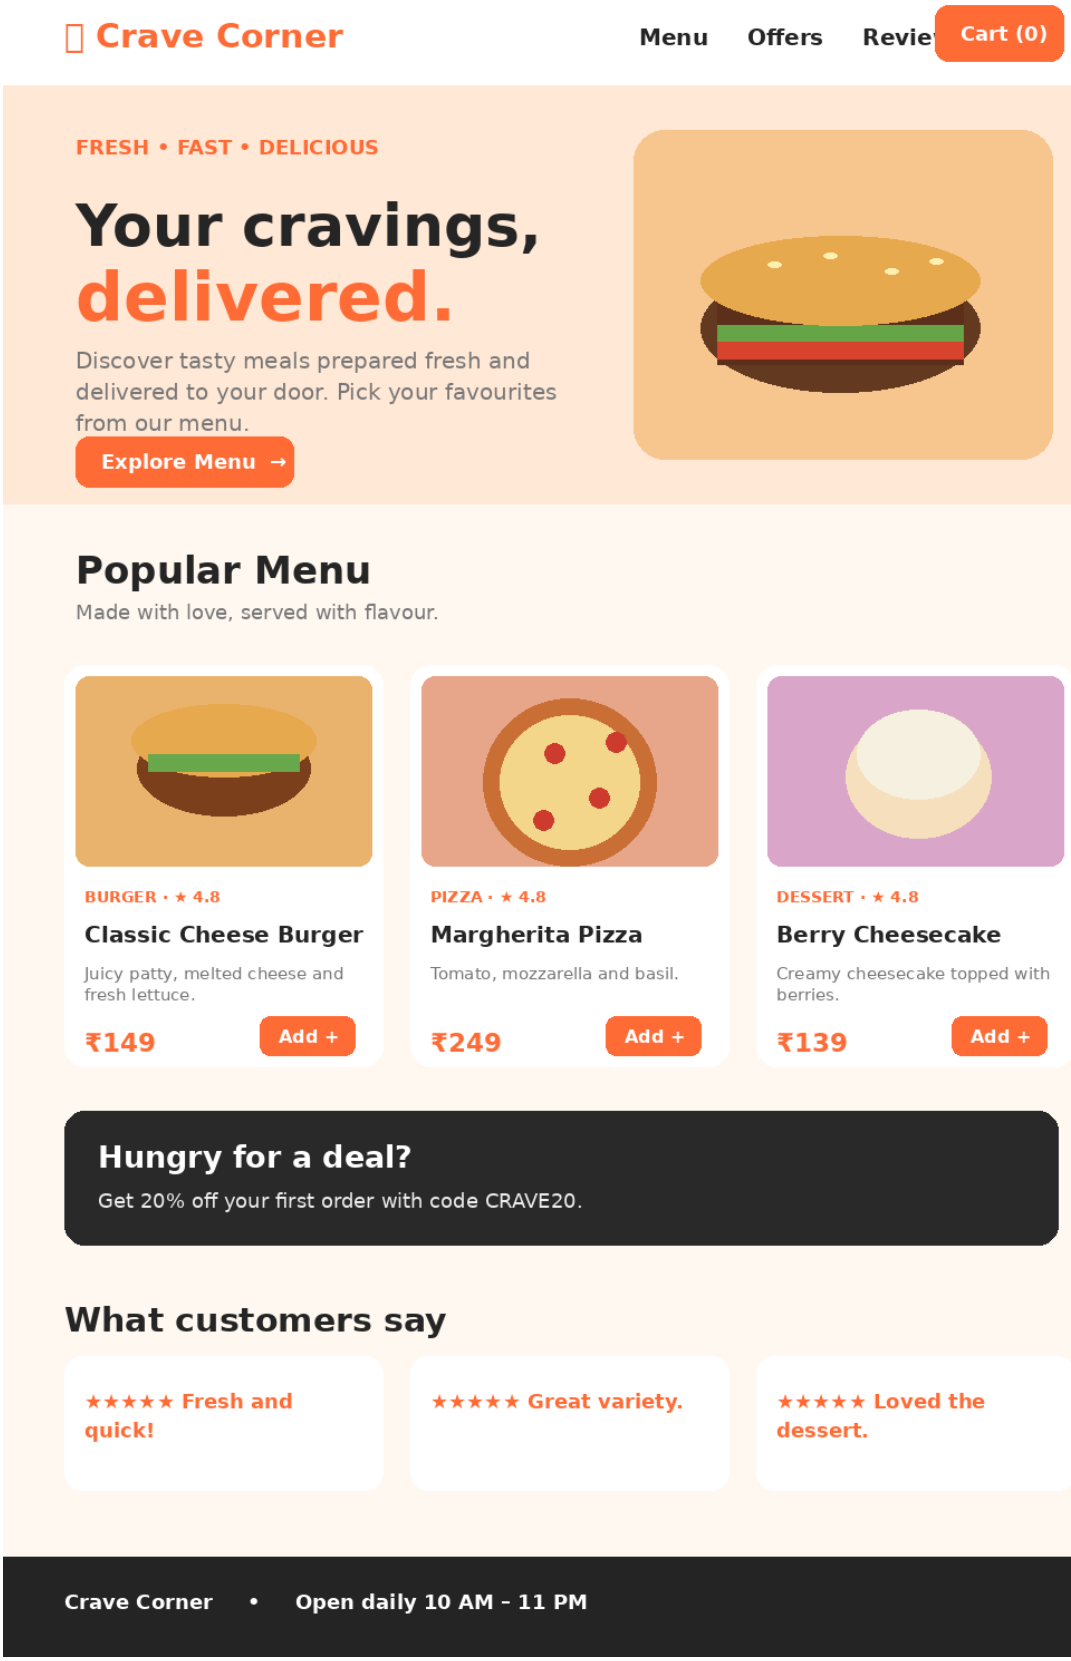

Target Users

Customers, students, families, and people ordering meals online.

Benefits

- Makes it easy to browse menu options in one place.
- Helps customers compare dishes and prices before ordering.
- Highlights offers and popular menu items.
- Demonstrates common interactive features of a food-ordering website.

Case Study 22: Movie Review and Rating Website

Overview

The Movie Review and Rating Website helps users discover films and decide what to watch. Visitors can browse movie cards, search for titles, explore genres, view ratings, and read brief review information. A review area demonstrates how users can share their opinions.

Objectives

- Organize movie information in a clear and attractive format.
- Help users discover movies by title or genre.
- Show ratings and summaries to support viewing choices.
- Demonstrate a simple way to add a user review.

Key Features

- Movie cards with poster-style images, genre, year, and rating.
- Search and genre-filter controls.
- Read Review buttons that show more movie information.
- Review form for entering a movie title and review text.
- Dark cinematic design with responsive card layout.

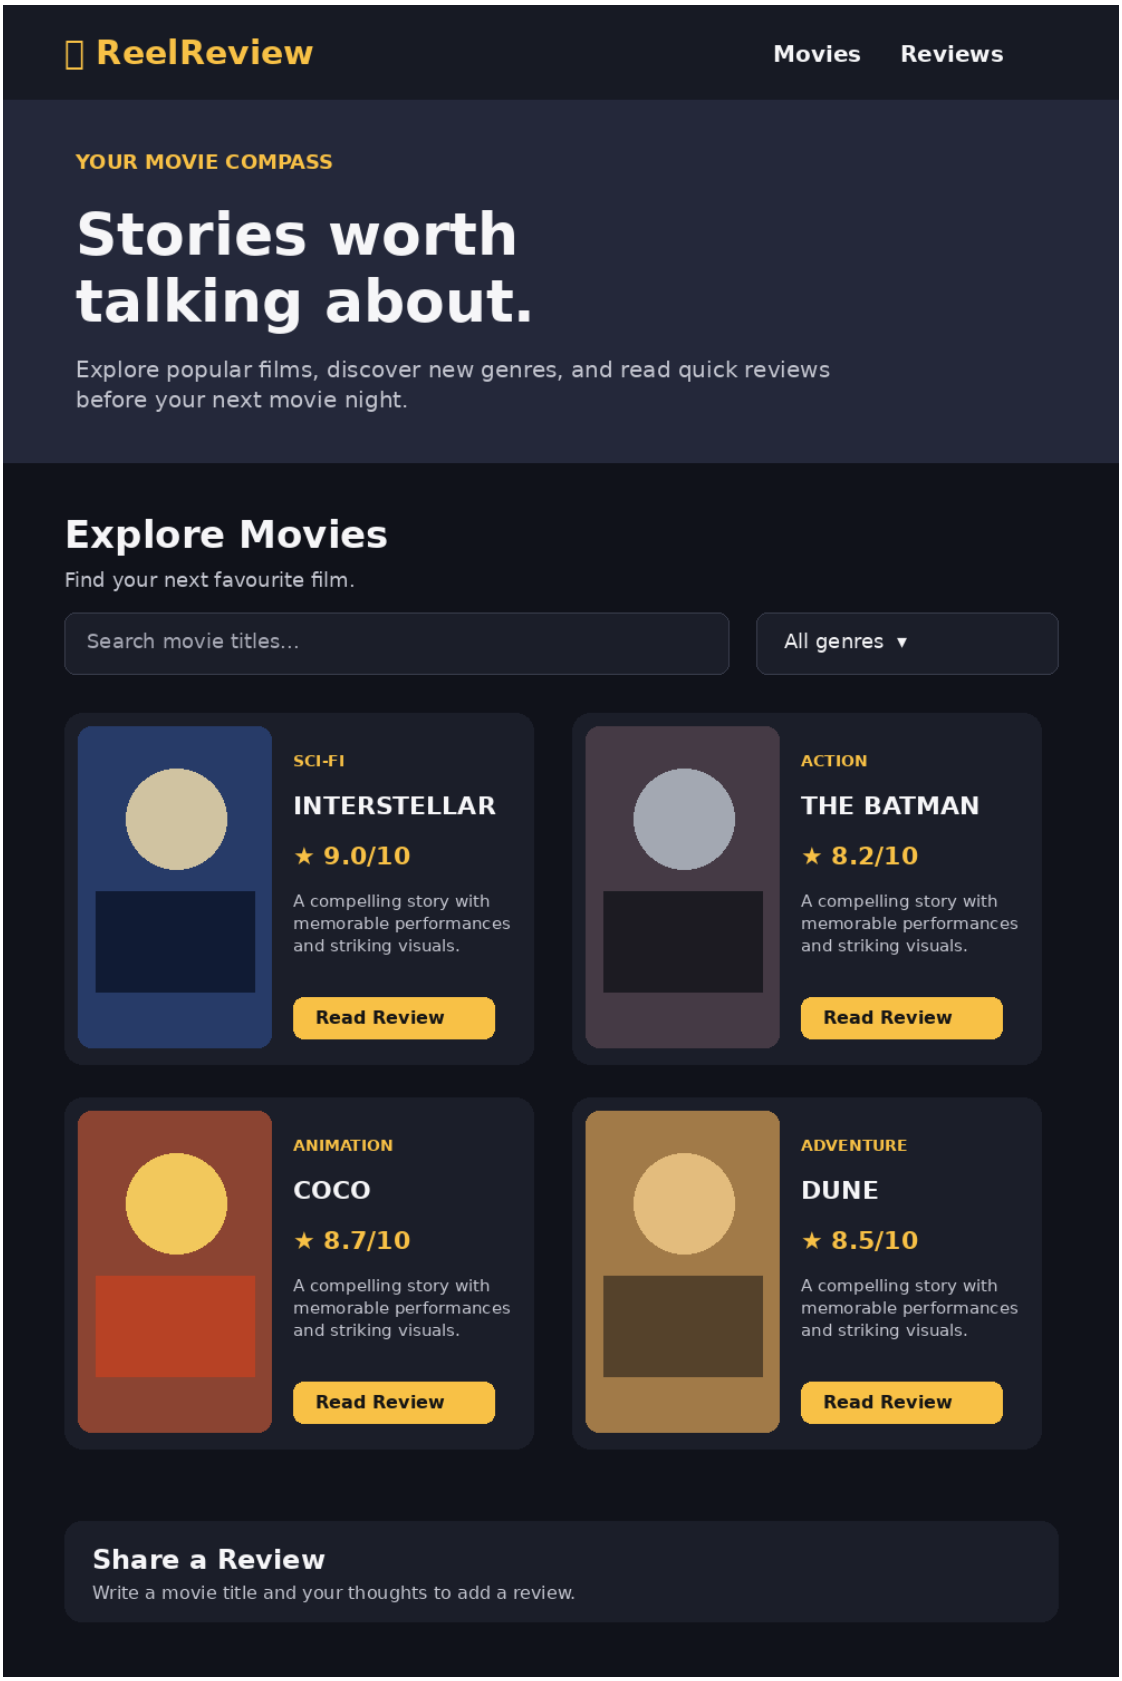

Target Users

Movie fans, students, reviewers, and people looking for films to watch.

Benefits

- Makes movie information easy to scan.
- Helps users compare ratings and genres.
- Encourages sharing opinions about films.
- Brings movie discovery and review features together in one interface.

Case Study 26: College Fest Management Website

Overview

The College Fest Management Website presents college festival events, schedules, venues, and registration details in one place. It helps students explore technical, cultural, creative, and competitive activities and provides a simple front-end registration demonstration.

Objectives

- Publish event details, dates, times, and venues.
- Help students explore events and select activities.
- Provide a clear event schedule and registration form.
- Improve access to festival information for participants.

Key Features

- Festival landing page with date and campus details.
- Event cards with descriptions, categories, timings, and registration buttons.
- Festival schedule table.
- Registration form with name, college or department, email, and event selection.
- Responsive layout for desktop and mobile devices.

Target Users

College students, event participants, student coordinators, faculty, and fest organizers.

Benefits

- Keeps event information organized in one website.
- Reduces repeated questions about event times and venues.
- Makes it easier for students to find and register interest in activities.
- Supports better communication between organizers and participants.
